Oliver de Armas

High school student and aspiring aerospace engineer
oliverdearmas@outlook.com | Miami, FL | linkedin.com/in/oliver-de-armas-259188345

Summary

I am a student engineer interested in aerospace, rocketry, and hands-on design. I build projects that combine CAD, prototyping, electronics, and testing, and I am looking for opportunities to keep learning through real-world engineering work.

Education

Belen Jesuit Preparatory School — 2022 to Present

High school diploma

Relevant coursework in physics, mathematics, and engineering design. Focused on hands-on project work in CAD, manufacturing, and prototyping.

Projects

L1 Certification Rocket with Custom Avionics — 2026 to Present

• Designed the rocket airframe and early concept work in CAD while exploring flight and structure requirements.

• Modeled the project around OpenRocket simulation, 3D printing, and fabrication workflows for a launch-ready build.

• Planning and prototyping custom avionics and flight-system integration for the rocket build.

Laser Cut Teddy Bear Chair — 2026

• Designed and built a small seated chair for a teddy bear using laser-cut wood and iterative tolerancing.

• Used CAD, prototype testing, and fabrication adjustments to improve fit and assembly quality.

Skills

CAD (Fusion 360 / design work) | OpenRocket | 3D printing | Laser cutting | HTML & CSS | Python | Electronics / soldering | Spanish

Additional Information

Interested in aerospace engineering, rocketry, internships, and hands-on technical projects. Open to collaborative design and fabrication opportunities.
